

Amendments to the Specification:

Please cancel the paragraph beginning on page 7, line 7 and replace it with the following paragraph:

The pneumatic dampener 90 includes a base chamber 102 and a piston-type structure 104 slidably secured therein defining a first pneumatic chamber 106 and a second pneumatic chamber 108. The distal end 110 of the piston-type structure 104 is operably secured to the trailer-engaging portion 64 at pivot 72c and the base chamber 102 is operably secured the base portion 62 at pivot 72b. Each pneumatic chamber 106, 108 has a pneumatic port 112a, 112b, respectively, for adding and removing pneumatic load from the respective chambers.
